***Election/Restriction***

Applicant's submission of the instant application as a 371 is acknowledged, however the claimed invention does not provide a single special technical feature that is distinguished over the prior art because antimicrobial genes and their expressions in transgenic plants for increased resistance were known in the prior art. The technical feature linking Groups I-II appears to be that they all relate to nucleic acid sequences encoding antimicrobial peptides. However, nucleic acid sequences encoding antimicrobial peptides have already been disclosed in the prior art as evidenced by Jaynes et al (5,597,946, filed May 1995). Jaynes et al discloses the nucleic acid fragments of claims 3 and 4 (see columns 4-10). Therefore, the instant invention lacks Unity of Invention and restriction is set forth as it applies to U.S. practice.

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-9 and 13-30, drawn to. drawn to an isolated nucleic acid sequence encoding thanatin, homologous or complementary sequences thereof, chimeric gene, transformed disease resistant plants or a plant cell, and methods for producing said plant/plant cell.

Art Unit: 1638

II. Claims 10-12, drawn to fusion proteins .

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature of Group I is considered to be an isolated nucleic acid sequence encoding a thanatin, transformed plants or plant cells, and methods of expressing a protein.

The technical feature of Group II is considered to be isolated fusion proteins.

The claims that involve the isolated nucleic acid sequence encoding the thanatin protein, the vector containing it, the transformed plants or plant cells , and methods of expressing the protein are not linked to the protein because protein and DNA share technical feature that is well known in the art, since cloning and expression of recombinant protein are well known in the prior art.

Because inventions I-II are distinct for the reasons given above, and they have acquired a separate status in the art as shown by their different subject matter and fields of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

Art Unit: 1638

named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Papers relating to this application may be submitted to Technology Sector 1 by facsimile transmission. Papers should be faxed to Crystal Mall 1, Art Unit 1638, using fax number (703) 308-4242.
